Abstract: Aspergillosis can cause wide range of diseases such as abortion, respiratory infections and food poisoning. The emergence of drug-resistant fungal species has caused attention to be focused on developing new therapies against fungi. Some plant species have been identified antifungal properties. Because of the importance of fungal diseases, such as Aspergillus, in this study the effect of antifungal medicinal plants native to Iran, was introduced. The review carried out by searching scientific databases such as Google Scholar, SID, etc, key words, including fungi, Aspergillus, herbs and Iran to relevant articles were searched and were studied. Diagram of the present review were as follows. Zataria multiflora Boiss., Thymus eriocalyx, Mentha pulegium, Satureia hortensis, Secale montanum, Artemisia, Petroselinum crispum, Acimum basilicum, Anethum graveolens, Mentha viridis, Cuminum cyminum, Cinnamomum zeylanicum, Aloe vera, Rosa damascena, Coriandrum sativum Origanum majorana, Myrthus Communis L and Glycyrrhiza glabra are the most important medicinal plants against Aspergillus. Important compounds such as Carvacrol, Thymol, Palmitic acid, ApioI, Methyl chavicol, CaryophyUene oxide, Cimomene, Camphene, Mircen and Myrtenal, Menthol, Caryophyllene, Mentone and ect includes the active compounds of medicinal plants that have antibacterial and antifungi effects, which can be described as a combination of proven anti-Aspergillus context.

Keywords: fungus, Aspergillus, herbs, Iran.
tuberculosis (2). One of aflatoxin producing fungi in human and animal food is Aspergillus flavus. According to research conducted Aspergillus species is isolated from soft shell, hard shell and pistachios of Iran (3). The most important fungi are produced aflatoxin which can be separated from pistachios include A. parasiticus and Aspergillus flavus. These two species produce G1, B2, B1, G1 toxins (4).

Consumption of food contaminated with aflatoxins causes acute or chronic diseases such as cancer and liver if taken in high doses, can be fatal (5).

The medicinal plants are the rich source to treat diseases such as diabetes, kidney stones, colds, hyperlipidemia, parasitic and infectious diseases, constipation, dysmenorrhea, pain, sinusitis, and others (6-13). The presence of drug-resistant fungal species has caused attention to be focused on developing new therapies to elimination fungi diseases(14). Some plant species have been identified antifungal properties (15). Given the importance of fungal diseases, such as Aspergillus, in these study medicinal plants native to Iran with the anti-fungal effects is reported.

Method

The review carried out by searching scientific databases such as Google Scholar, SID, etc, key words, including fungi, Aspergillus, herbs and Iran to relevant articles were searched and were studied. Diagram of the present review were as follows.

<table>
<thead>
<tr>
<th>57 studies identified via electronic search in databases Google Scholar, PubMed, etc.</th>
<th>9 studies identified via manual search in references and experts’ guide.</th>
</tr>
</thead>
</table>

28 studies identified after removing duplicate publications and irrelevant studies

20 studies screened

11 studies assessed for eligibility

19 studies excluded including articles without English abstract in the electronic databases, etc.

Figure. Flow diagram for the study review

Results

Based on these results, the herb Zataria multiflora Boiss., Thymus eriocalyx, Mentha pulegium, Satureia hortensis, Secale montanum, Artemisia, Petroselinum crispum, Acimum basilicum, Anethum graveolens, Mentha viridis, Cuminum cymimum, Cinnamomum zeylanicum, Aloe vera, Rosa damascena, Coriandrum sativum Origanum majorana, Myrtus Communis L. and Glycyrrhiza glabra reported the most important medicinal plants are native to Iran with anti-Aspergillus. Additional information regarding the scientific name and dosage and effect of each herb mentioned in Table 1.

Discussion

Pharmaceutical active ingredients such as phenols, flavonoids, tannins, Anthocyanin and... cause having therapeutic effects in herbal pants (30-32).

Based on these results, Zataria multiflora Boiss, Thymus eriocalyx, Mentha pulegium, Satureia hortensis, Secale montanum, Artemisia, Petroselinum crispum, Acimium basilicum, Anethum graveolens, Mentha viridis, Cuminum cyminum, Cinnamomum zeylanicum, Aloe vera, Rosa damascena, Coriandrum sativum, Origanum majorana, Myrtus Communis L and Glycyrrhiza glabra are the most important medicinal plants against Aspergillosis native to Iran. Based on phytochemical studies, the active components of medicinal herbs analyzed and listed below. The most important phenolic compounds of thyme plant are Carvacrol and Thymol (34,35). It's known that palmitic acid and apical meristem are important compounds of Parsley. Methyl chavicol, caryophyllene oxide and limonene are important compounds extracted from Basil. The phytochemical results show that the effective ingredients of Dill includes decaron, limonene and alpha phellandrene. Menthol, pulgone, mentone, sabinene, piperitene, penine and methyl acetate are the most compound of peppermint oil (36-38). The active ingredients of Cuminum cyminum includes cumin, simonin, camphene, myrcene, myrthen, caryophyllene, phellandrene, cineole, gamma terpinene have been identified (39,40). Glycyrrhiza glabra contains trepens, coumarin, flavonoids and isoflavonoids which can have anti fungi effects (41). Aloe vera contains combinations such as phenolic compounds, saponins and anthraquinone (42). The combination of quercetin 3-o-glucoside, kaempferol-3-o-rutinoside in extracts of rose, kaempferol-3-o-arabinoside in rose's essence and geraniol, citronellol and nerol been identified (43). Myrtus essence contains flavonoids and tannins (44). The most important compound of Rosemary is alpha-pinene (45).

Because of the infectious diseases have high outbreak and spread (46-57), Therefore medicinal plants through their active ingredients have a good therapeutic effect (58-70). Medical plants listed in this article have antibacterial and antifungi effects, which can be described as a combination of proven anti-Aspergillus context.
